We say that E has **property (A)** if there is a net $(\{(x_{j,\lambda}, \phi_{k,\lambda}) : j, k = 1, \dots, n_\lambda\})_\lambda$ of finite biorthogonal systems with corresponding homomorphisms $\theta_\lambda : M_{n_\lambda} \rightarrow \mathcal{F}(E)$ with the following properties:

$\mathcal{B}(\ell^p \oplus \ell^q)$
with $p \neq q$
 $\mathcal{B}(\ell^p)$

Theorem (M. Daws & VR, 2008)

The following are equivalent for a Banach space E and $p \in [1, \infty)$:

- 1 $\mathcal{B}(\ell^p(E))$ is amenable;
- 2 $\ell^\infty(\mathcal{B}(\ell^p(E)))$ is amenable.

Idea

- $\ell^p(\ell^p(E)) \cong \ell^p(E)$
- $\ell^\infty(\mathcal{B}(\ell^p(E))) \cong$ block diagonal matrices in $\mathcal{B}(\ell^p(\ell^p(E)))$

Corollary

Suppose that $\mathcal{B}(\ell^p)$ is amenable for some $p \in [1, \infty)$. Then so are the Banach algebras $\ell^\infty(\mathcal{B}(\ell^p))$

Definition

Let $p \in [1, \infty)$, and E and F be Banach spaces. A linear map $T : E \rightarrow F$ is called **p -summing** if the amplification $\text{id}_{\ell^p} \otimes T : \ell^p \otimes E \rightarrow \ell^p \otimes F$ extends to a bounded map from $\ell^p \check{\otimes} E$ to $\ell^p(F)$. The operator norm of $\text{id}_{\ell^p \otimes T} : \ell^p \check{\otimes} E \rightarrow \ell^p(F)$ is called the **p -summing norm** of T and denoted by $\pi_p(T)$.

$$\pi_p(\text{id}_{\ell_N^2}) \sim N^{\frac{1}{2}}$$

Let $p \in (1, \infty)$, and let E be an \mathcal{L}^p -space. Then $\mathcal{B}(\ell^p(E))$ is not amenable.

Proof.

If $\mathcal{B}(\ell^p(E))$ is amenable, then so is $\ell^\infty(\mathcal{B}(\ell^p(E)))$ as is $\ell^\infty(\mathcal{K}(\ell^p(E)))$. Impossible! □
